- [Work](#)
- [Networking](#)
- [Decentralized Systems](#)
- [Health and Social Science](#)
- [Events](#)
- [Testing](#)
- [Miscellaneous](#)
- [Related](#)

Platforms

- [Node.js](#) - Async non-blocking event-driven JavaScript runtime built on Chrome's V8 JavaScript engine.
 - [Cross-Platform](#) - Writing cross-platform code on Node.js.
- [Frontend Development](#)
- [iOS](#) - Mobile operating system for Apple phones and tablets.
- [Android](#) - Mobile operating system developed by Google.
- [IoT & Hybrid Apps](#)
- [Electron](#) - Cross-platform native desktop apps using JavaScript/HTML/CSS.
- [Cordova](#) - JavaScript API for hybrid apps.
- [React Native](#) - JavaScript framework for writing natively rendering mobile apps for iOS and Android.
- [Xamarin](#) - Mobile app development IDE, testing, and distribution.
- Linux
 - [Containers](#)
 - [eBPF](#) - Virtual machine that allows you to write more efficient and powerful tracing and monitoring for Linux systems.
 - [Arch-based Projects](#) - Linux distributions and projects based on Arch Linux.
 - [AppImage](#) - Package apps in a single file that works on various mainstream Linux distributions.
 - [Omarchy](#) - Opinionated Arch Linux and Hyprland desktop environment from the creator of Ruby on Rails.
- macOS - Operating system for Apple's Mac computers.
 - [Screensavers](#)
 - [Apps](#)
 - [Open Source Apps](#)
- [watchOS](#) - Operating system for the Apple Watch.
- [JVM](#)
- [Salesforce](#)
- [Amazon Web Services](#)
- [Windows](#) - Consumer desktop operating system.
 - [PowerToys Run Plugins](#) - Community plugins for the Windows quick launcher.
- [IPFS](#) - P2P hypermedia protocol.
- [Fuse](#) - Mobile development tools.
- [Heroku](#) - Cloud platform as a service.
- [Raspberry Pi](#) - Credit card-sized computer aimed at teaching kids programming, but capable of a lot more.
- [Qt](#) - Cross-platform GUI app framework.
- [WebExtensions](#) - Cross-browser extension system.
- [Smart TV](#) - Create apps for different TV platforms.
- [GNOME](#) - Simple and distraction-free desktop environment for Linux.
- [KDE](#) - A free software community dedicated to creating an open and user-friendly computing experience.
- [.NET](#)
 - [Core](#)
 - [Roslyn](#) - Open-source compilers and code analysis APIs for C# and VB.NET languages.
- [DigitalOcean](#) - Cloud computing platform designed for developers.

- [Flutter](#) - Google's mobile SDK for building native iOS and Android apps from a single codebase written in Dart.
- [Home Assistant](#) - Open source home automation that puts local control and privacy first.
- [IBM Cloud](#) - Cloud platform for developers and companies.
- [Firebase](#) - App development platform built on Google Cloud.
- [Adafruit IO](#) - Visualize and store data from any device.
- [Cloudflare](#) - CDN, DNS, DDoS protection, and security for your site.
- [Actions on Google](#) - Developer platform for Google Assistant.
- [ESP](#) - Low-cost microcontrollers with WiFi and broad IoT applications.
- [Deno](#) - A secure runtime for JavaScript and TypeScript that uses V8 and is built in Rust.
- [DOS](#) - Operating system for x86-based personal computers that was popular during the 1980s and early 1990s.
- [Nix](#) - Package manager for Linux and other Unix systems that makes package management reliable and reproducible.
- [Integration](#) - Linking together different IT systems (components) to functionally cooperate as a whole.
- [Node-RED](#) - A programming tool for wiring together hardware devices, APIs, and online services.
- [Low Code](#) - Allowing business professionals to address their needs on their own with little to no coding skills.
- [Capacitor](#) - Cross-platform open source runtime for building Web Native apps.
- [ArcGIS Developer](#) - Mapping and location analysis platform for developers.
- [Bluetooth Low Energy](#) - Low-power wireless communication protocol ideal for IoT, wearables, and other battery-powered applications.
- [Uno Platform](#) - Open-source .NET UI platform for building cross-platform apps.
- [Google Cloud](#) - Cloud computing services by Google.
- [Firebase Genkit](#) - An open-source framework for building AI-powered apps and features.
- [Backstage](#) - Open-source platform for building Internal Developer Portals that unify tools and workflows.

Programming Languages

- [JavaScript](#)
 - [Promises](#)
 - [Standard Style](#) - Style guide and linter.
 - [Must Watch Talks](#)
 - [Tips](#)
 - [Network Layer](#)
 - [Micro npm Packages](#)
 - [Mad Science npm Packages](#) - Impossible sounding projects that exist.
 - [Maintenance Modules](#) - For npm packages.
 - [npm](#) - Package manager.
 - [AVA](#) - Test runner.
 - [ESLint](#) - Linter.
 - [Functional Programming](#)
 - [Observables](#)
 - [npm scripts](#) - Task runner.

- [30 Seconds of Code](#) - Code snippets you can understand in 30 seconds.
- [Ponyfills](#) - Like polyfills but without overriding native APIs.
- [Swift](#) - Apple's compiled programming language that is secure, modern, programmer-friendly, and fast.
 - [Education](#)
 - [Playgrounds](#)
- [Python](#) - General-purpose programming language designed for readability.
 - [Asyncio](#) - Asynchronous I/O in Python 3.
 - [Scientific Audio](#) - Scientific research in audio/music.
 - [CircuitPython](#) - A version of Python for microcontrollers.
 - [Data Science](#) - Data analysis and machine learning.
 - [Typing](#) - Optional static typing for Python.
 - [MicroPython](#) - A lean and efficient implementation of Python 3 for microcontrollers.
- [Rust](#)
 - [Pest](#) - Parser generator.
- [Haskell](#)
- [PureScript](#)
- [Go](#)
- [Scala](#)
 - [Scala Native](#) - Optimizing ahead-of-time compiler for Scala based on LLVM.
- [Ruby](#)
- [Clojure](#)
- [ClojureScript](#)
- [Elixir](#)
- [Elm](#)
- [Erlang](#)
- [Julia](#) - High-level dynamic programming language designed to address the needs of high-performance numerical analysis and computational science.
- [Lua](#)
- [C/C++](#) - General-purpose language with a bias toward system programming and embedded, resource-constrained software.
- [R](#) - Functional programming language and environment for statistical computing and graphics.
 - [Learning](#)
- [D](#)
- [Common Lisp](#) - Powerful dynamic multiparadigm language that facilitates iterative and interactive development.
 - [Learning](#)
- [Perl](#)
- [Groovy](#)
- [Dart](#)
- [Java](#) - Popular secure object-oriented language designed for flexibility to "write once, run anywhere".
 - [RxJava](#)
 - [J2ME](#) - Java specification designed for old keypad phones and PDAs.
- [Kotlin](#)
- [OCaml](#)

- [ColdFusion](#)
- [Fortran](#)
- [PHP](#) - Server-side scripting language.
 - [Composer](#) - Package manager.
- [Pascal](#)
- [AutoHotkey](#)
- [Autolt](#)
- [Crystal](#)
- [CMake](#) - Build, test, and package software.
- [ActionScript 3](#) - Object-oriented language targeting Adobe AIR.
- [Idris](#) - General purpose pure functional programming language with dependent types influenced by Haskell and ML.
- [Ada/SPARK](#) - Modern programming language designed for large, long-lived apps where reliability and efficiency are essential.
- [Q#](#) - Domain-specific programming language used for expressing quantum algorithms.
- [Imba](#) - Programming language inspired by Ruby and Python and compiles to performant JavaScript.
- [Vala](#) - Programming language designed to take full advantage of the GLib and GNOME ecosystems, while preserving the speed of C code.
- [Coq](#) - Formal language and environment for programming and specification which facilitates interactive development of machine-checked proofs.
- [V](#) - Simple, fast, safe, compiled language for developing maintainable software.
- [Move](#) - Domain-specific programming language for writing safe smart contracts.
- [Esolangs](#) - Programming languages designed for experimentation or as jokes rather than actual use.
- [VBA](#) - An event-driven version of Visual Basic 6.0 built into most Microsoft Office apps for automation and scripting.
- [F#](#) - A .NET-based language with focus on functional programming.

Russia invaded Ukraine, killing tens of thousands of civilians and displacing millions more. It's a genocide. Please help us defend freedom, democracy and Ukraine's right to exist.

[Help Ukraine Now →](#)

Front-End Development

- [ES6 Tools](#)
- [Web Performance Optimization](#)
- [Web Tools](#)

- [CSS](#) - Style sheet language that specifies how HTML elements are displayed on screen.
 - [Critical-Path Tools](#)
 - [Scalability](#)
 - [Must-Watch Talks](#)
 - [Protips](#)
 - [Frameworks](#)
- [React](#) - JavaScript library for building user interfaces.
 - [Relay](#) - Framework for building data-driven React apps.
 - [React Hooks](#) - Lets you use state and other React features without writing a class.
- [Web Components](#)
- [Polymer](#) - JavaScript library to develop Web Components.
- [Angular](#) - App framework.
- [Backbone](#) - App framework.
- [HTML5](#) - Markup language used for websites & web apps.
- [SVG](#) - XML-based vector image format.
- [Canvas](#)
- [KnockoutJS](#) - JavaScript library.
- [Dojo Toolkit](#) - JavaScript toolkit.
- [Inspiration](#)
- [Ember](#) - App framework.
- [Android UI](#)
- [iOS UI](#)
- [Meteor](#)
- [BEM](#)
- [Flexbox](#)
- [Web Typography](#)
- [Web Accessibility](#)
- [Material Design](#)
- [D3](#) - Library for producing dynamic, interactive data visualizations.
- [Emails](#)
- [jQuery](#) - Easy to use JavaScript library for DOM manipulation.
 - [Tips](#)
- [Web Audio](#)
- [Offline-First](#)
- [Static Website Services](#)
- [Cycle.js](#) - Functional and reactive JavaScript framework.
- [Text Editing](#)
- [Motion UI Design](#)
- [Vue.js](#) - App framework.
- [Marionette.js](#) - App framework.
- [Aurelia](#) - App framework.
- [Charting](#)
- [Ionic Framework](#)
- [Chrome DevTools](#)

- [PostCSS](#) - CSS tool.
- [Draft.js](#) - Rich text editor framework for React.
- [Service Workers](#)
- [Progressive Web Apps](#)
- [choo](#) - App framework.
- [Redux](#) - State container for JavaScript apps.
- [Browserify](#) - Module bundler.
- [Sass](#) - CSS preprocessor.
- [Ant Design](#) - Enterprise-class UI design language.
- [Less](#) - CSS preprocessor.
- [WebGL](#) - JavaScript API for rendering 3D graphics.
- [Preact](#) - App framework.
- [Progressive Enhancement](#)
- [Next.js](#) - Framework for server-rendered React apps.
- [lit](#) - Library for building web components with a declarative template system.
- [JAMstack](#) - Modern web development architecture based on client-side JavaScript, reusable APIs, and prebuilt markup.
- [WordPress-Gatsby](#) - Web development technology stack with WordPress as a back end and Gatsby as a front end.
- [Mobile Web Development](#) - Creating a great mobile web experience.
- [Storybook](#) - Development environment for UI components.
- [Blazor](#) - .NET web framework using C#/Razor and HTML that runs in the browser with WebAssembly.
- [PageSpeed Metrics](#) - Metrics to help understand page speed and user experience.
- [Tailwind CSS](#) - Utility-first CSS framework for rapid UI development.
- [Seed](#) - Rust framework for creating web apps running in WebAssembly.
- [Web Performance Budget](#) - Techniques to ensure certain performance metrics for a website.
- [Web Animation](#) - Animations in the browser with JavaScript, CSS, SVG, etc.
- [Yew](#) - Rust framework inspired by Elm and React for creating multi-threaded frontend web apps with WebAssembly.
- [Material-UI](#) - Material Design React components for faster and easier web development.
- [Building Blocks for Web Apps](#) - Standalone features to be integrated into web apps.
- [Svelte](#) - App framework.
- [Design systems](#) - Collection of reusable components, guided by rules that ensure consistency and speed.
- [Inertia.js](#) - Make single-page apps without building an API.
- [MDBBootstrap](#) - Templates, layouts, components, and widgets to rapidly build websites.
- [Master CSS](#) - A virtual CSS language with enhanced syntax.
- [Hydrogen](#) - Edge-first framework for building Shopify storefronts with React.
- [Tiny JS](#) - Frontend libraries that fit into 2 kB with dependencies.
- [Frontend GIS](#) - Geographic Information Systems (GIS) for web browsers.
- [WebGPU](#) - JavaScript API for rendering and compute on GPUs.
- [WebAssembly](#) - A portable binary format for running code efficiently across platforms.

Back-End Development

- [Flask](#) - Python framework.
- [Docker](#)
- [Vagrant](#) - Automation virtual machine environment.
- [Pyramid](#) - Python framework.
- [Play1 Framework](#)
- [CakePHP](#) - PHP framework.
- [Symfony](#) - PHP framework.
 - [Education](#)
- [Laravel](#) - PHP framework.
 - [Education](#)
- [Rails](#) - Web app framework for Ruby.
 - [Gems](#) - Packages.
- [Phalcon](#) - PHP framework.
- [Useful .htaccess Snippets](#)
- [nginx](#) - Web server.
- [Dropwizard](#) - Java framework.
- [Kubernetes](#) - Open-source platform that automates Linux container operations.
- [Lumen](#) - PHP micro-framework.
- [Serverless Framework](#) - Serverless computing and serverless architectures.
- [Apache Wicket](#) - Java web app framework.
- [Vert.x](#) - Toolkit for building reactive apps on the JVM.
- [Terraform](#) - Tool for building, changing, and versioning infrastructure.
- [Vapor](#) - Server-side development in Swift.
- [Dash](#) - Python web app framework.
- [FastAPI](#) - Python web app framework.
- [CDK](#) - Open-source software development framework for defining cloud infrastructure in code.
- [IAM](#) - User accounts, authentication and authorization.
- [Slim](#) - PHP framework.
- [Fiber](#) - Web framework built on top of Fasthttp, the fastest HTTP engine for Go.
- [Kustomize](#) - Kubernetes native declarative configuration management tool.
- [OpenTofu](#) - Open-source infrastructure as code tool.
- [Reflex](#) - Python web framework for building both your frontend and backend with no JavaScript.

Computer Science

- [University Courses](#)
- [Data Science](#)
 - [Tutorials](#)
- [Machine Learning](#)
 - [Tutorials](#)
 - [ML with Ruby](#) - Learning, implementing, and applying Machine Learning using Ruby.
 - [Core ML Models](#) - Models for Apple's machine learning framework.
 - [H2O](#) - Open source distributed machine learning platform written in Java with APIs in R, Python, and Scala.
 - [Software Engineering for Machine Learning](#) - From experiment to production-level machine

- learning.
- [AI in Finance](#) - Solving problems in finance with machine learning.
- [JAX](#) - Automatic differentiation and XLA compilation brought together for high-performance machine learning research.
- [XAI](#) - Providing insight, explanations, and interpretability to machine learning methods.
- [Speech and Natural Language Processing](#)
 - [Spanish](#)
 - [NLP with Ruby](#)
 - [Question Answering](#) - The science of asking and answering in natural language with a machine.
 - [Natural Language Generation](#) - Generation of text used in data-to-text, conversational agents, and narrative generation applications.
- [Linguistics](#)
- [Cryptography](#)
 - [Papers](#) - Theory basics for using cryptography by non-cryptographers.
- [Computer Vision](#)
- [Deep Learning](#) - Neural networks.
 - [TensorFlow](#) - Library for machine intelligence.
 - [TensorFlow.js](#) - WebGL-accelerated machine learning JavaScript library for training and deploying models.
 - [TensorFlow Lite](#) - Framework that optimizes TensorFlow models for on-device machine learning.
 - [Papers](#) - The most cited deep learning papers.
 - [Education](#)
- [Deep Vision](#)
- [Open Source Society University](#)
- [Functional Programming](#)
- [Empirical Software Engineering](#) - Evidence-based research on software systems.
- [Static Analysis & Code Quality](#)
- [Information Retrieval](#) - Learn to develop your own search engine.
- [Quantum Computing](#) - Computing that utilizes quantum mechanics and qubits on quantum computers.
- [Theoretical Computer Science](#) - The interplay of computer science and pure mathematics, distinguished by its emphasis on mathematical rigour and technique.
- [Conversational AI](#) - Build awesome chatbots and digital assistants.
- [Generative AI](#) - Automatically generates a wide range of unique content in text, image, and audio format.
- [Position-Based Quantum Cryptography](#) - Theory on quantum cryptography that utilizes special relativistic constraints to achieve quantum-security under certain conditions.

Big Data

- [Big Data](#)
- [Public Datasets](#)
- [Hadoop](#) - Framework for distributed storage and processing of very large data sets.
- [Data Engineering](#)
- [Streaming](#)

- [Apache Spark](#) - Unified engine for large-scale data processing.
- [Qlik](#) - Business intelligence platform for data visualization, analytics, and reporting apps.
- [Splunk](#) - Platform for searching, monitoring, and analyzing structured and unstructured machine-generated big data in real time.
- [Network Analysis](#)

Theory

- [Papers We Love](#)
- [Talks](#)
- [Algorithms](#)
 - [Education](#) - Learning and practicing.
- [Algorithm Visualizations](#)
- [Artificial Intelligence](#)
- [Search Engine Optimization](#)
- [Competitive Programming](#)
- [Math](#)
- [Recursion Schemes](#) - Traversing nested data structures.
- [Audit Algorithms](#) - Algorithmic audits of algorithms.
- [AGI & CoCoSci](#) - The reciprocation of Artificial General Intelligence (AGI) and Computational Cognitive Sciences (CoCoSci).
- [Complex Systems](#) - The scientific field studying systems with multiple interacting parts and emergent properties.
- [VLM Architectures](#) - Vision Language Model architectures.

Books

- [Free Programming Books](#)
- [Go Books](#)
- [R Books](#)
- [Mind Expanding Books](#)
- [Book Authoring](#)
- [Elixir Books](#)

Editors

- [Sublime Text](#)
- [Vim](#)
- [Neovim](#) - Vim-fork focused on extensibility and usability.
- [Emacs](#)
- [Visual Studio Code](#) - Cross-platform open-source text editor.

Gaming

- [Game Development](#)
- [Game Talks](#)

- [Godot](#) - Game engine.
- [Open Source Games](#)
- [Unity](#) - Game engine.
- [Chess](#)
- [LÖVE](#) - Game engine.
- [PICO-8](#) - Fantasy console.
- [Game Boy Development](#)
- [Construct 2](#) - Game engine.
- [Gideros](#) - Game engine.
- [Minecraft](#) - Sandbox video game.
- [ComputerCraft](#) - Minecraft mod that adds programmable computers.
- [Game Datasets](#) - Materials and datasets for Artificial Intelligence in games.
- [Haxe Game Development](#) - A high-level strongly typed programming language used to produce cross-platform native code.
- [libGDX](#) - Java game framework.
- [PlayCanvas](#) - Game engine.
- [Game Remakes](#) - Actively maintained open-source game remakes.
- [Flame](#) - Game engine for Flutter.
- [Discord Communities](#) - Chat with friends and communities.
- [CHIP-8](#) - Virtual computer game machine from the 70s.
- [Games of Coding](#) - Learn a programming language by making games.
- [Esports](#) - Video games played as a sport.
- [Learn Gamedev](#) - The craft of video game creation.
- [Game Engine Development](#) - Building software to speed up game creation.
- [GameMaker](#) - Game engine.
- [Game Production](#) - Leading the process of designing, developing, testing and distributing a video game from concept to release.
- [Babylon.js](#) - Game engine for cross-platform web and native game development.
- [Roblox](#) - Immersive platform for hosting millions of diverse experiences.

Development Environment

- [Quick Look Plugins](#) - For macOS.
- [Dev Env](#)
- [Dotfiles](#)
- [Shell](#)
- [Fish](#) - User-friendly shell.
- [Command-Line Apps](#)
- [ZSH Plugins](#)
- [GitHub](#) - Hosting service for Git repositories.
 - [Browser Extensions](#)
 - [Cheat Sheet](#)
 - [Pinned Gists](#) - Dynamic pinned gists for your GitHub profile.
- [Git Cheat Sheet & Git Flow](#)

- [Git Tips](#)
- [Git Add-ons](#) - Enhance the `git` CLI.
- [Git Hooks](#) - Scripts for automating tasks during `git` workflows.
- [SSH](#)
- [FOSS for Developers](#)
- [Hyper](#) - Cross-platform terminal app built on web technologies.
- [Terminals Are Sexy](#)
- [GitHub Actions](#) - Create tasks to automate your workflow and share them with others on GitHub.
- [WezTerm](#) - Powerful cross-platform terminal emulator.

Entertainment

- [Science Fiction](#) - Scifi.
- [Fantasy](#)
- [Podcasts](#)
- [Email Newsletters](#)
- [IT Quotes](#)

Databases

- [Database](#)
- [MySQL](#)
- [SQLAlchemy](#)
- [InfluxDB](#)
- [Neo4j](#)
- [MongoDB](#) - NoSQL database.
- [RethinkDB](#)
- [TinkerPop](#) - Graph computing framework.
- [PostgreSQL](#) - Object-relational database.
- [CouchDB](#) - Document-oriented NoSQL database.
- [HBase](#) - Distributed, scalable, big data store.
- [NoSQL Guides](#) - Help on using non-relational, distributed, open-source, and horizontally scalable databases.
- [Database Tools](#) - Everything that makes working with databases easier.
- [TypeDB](#) - Logical database to organize large and complex networks of data as one body of knowledge.
- [Cassandra](#) - Open-source, distributed, wide column store, NoSQL database management system.
- [Supabase](#) - An open-source alternative to Firebase.
- [PocketBase](#) - An open-source, Go-based backend in one file.
- [Neon](#) - An open-source alternative to AWS Aurora.

Media

- [Fonts](#)
- [Codeface](#) - Text editor fonts.
- [Stock Resources](#)

- [GIF](#) - Image format known for animated images.
- [Music](#)
- [Open Source Documents](#)
- [Audio Visualization](#)
- [Broadcasting](#)
- [Pixel Art](#) - Pixel-level digital art.
- [FFmpeg](#) - Cross-platform solution to record, convert and stream audio and video.
- [Icons](#) - Downloadable SVG/PNG/font icon projects.
- [Audiovisual](#) - Lighting, audio and video in professional environments.
- [VLC](#) - Cross-platform media player software and streaming server.
- [Audio Over IP](#) - Reliably transmit uncompressed, low-latency audio over an IP (layer 3) network.

Learn

- [CLI Workshoppers](#) - Interactive tutorials.
- [Learn to Program](#)
- [Speaking](#)
- [Tech Videos](#)
- [Computer History](#)
- [Programming for Kids](#)
- [STEAM](#) - Supplements for specific science, technology, engineering, arts, and math (STEAM) courses across all grade levels.
- [Educational Games](#) - Learn while playing.
- [JavaScript Learning](#)
- [CSS Learning](#) - Mainly about CSS – the language and the modules.
- [Product Management](#) - Learn how to be a better product manager.
- [Roadmaps](#) - Gives you a clear route to improve your knowledge and skills.
- [YouTubers](#) - Watch video tutorials from YouTubers that teach you about technology.
- [Hackathon](#) - Running fun and productive hackathons.
- [Certificates](#) - Free computer science certifications to showcase your knowledge.

Security

- [Application Security](#)
- [Security](#)
- [CTF](#) - Capture The Flag.
- [Cyber Security University](#) - Free educational resources that focus on learning by doing.
- [Malware Analysis](#)
- [Android Security](#)
- [Hacking](#)
- [Hacking Spots](#)
- [Honeypots](#) - Deception trap, designed to entice an attacker into attempting to compromise the information systems in an organization.
- [Incident Response](#)
- [Vehicle Security and Car Hacking](#)

- [Web Security](#) - Security of web apps & services.
- [Lockpicking](#) - The art of unlocking a lock by manipulating its components without the key.
- [Cybersecurity Blue Team](#) - Groups of individuals who identify security flaws in information technology systems.
- [Fuzzing](#) - Automated software testing technique that involves feeding pseudo-randomly generated input data.
- [Embedded and IoT Security](#)
- [GDPR](#) - Regulation on data protection and privacy for all individuals within EU.
- [DevSecOps](#) - Integration of security practices into [DevOps](#).
- [Executable Packing](#) - Packing and unpacking executable formats.
- [Malware Persistence](#) - Techniques that adversaries use to keep access to systems across restarts.
- [EVM Security](#) - Understanding the Ethereum Virtual Machine security ecosystem.
- [Password Cracking](#) - The process of recovering passwords from data that has been stored in or transmitted by a system in scrambled form.
- [Security Card Games](#) - Train your skills and discuss various security topics.
- [Suricata](#) - Intrusion detection/prevention system and network security monitoring engine.
- [Prompt Injection](#) - A type of vulnerability that specifically targets machine learning models.
- [Detection Engineering](#) - Design, build, and operate detective cybersecurity controls.
- [Annual Security Reports](#) - Exploring cybersecurity trends, insights, and challenges.
- [CI/CD Attacks](#) - Offensive research of systems and processes related to developing and deploying code.
- [OpenID Connect](#) - Identity standard and authentication protocol built on OAuth 2.0 for user identity assertion.

Content Management Systems

- [Umbraco](#)
- [Refinery CMS](#) - Ruby on Rails CMS.
- [Wagtail](#) - Django CMS focused on flexibility and user experience.
- [Textpattern](#) - Lightweight PHP-based CMS.
- [Drupal](#) - Extensible PHP-based CMS.
- [Craft CMS](#) - Content-first CMS.
- [Sitecore](#) - .NET digital marketing platform that combines CMS with tools for managing multiple websites.
- [Silverstripe CMS](#) - PHP MVC framework that serves as a classic or headless CMS.
- [Directus](#) - A real-time API and app dashboard for managing SQL database content.
- [Plone](#) - Open source Python CMS.
- [Payload](#) - Next.js native and open source headless CMS.

Hardware

- [Robotics](#)
- [Internet of Things](#)
- [Electronics](#) - For electronic engineers and hobbyists.
- [Bluetooth Beacons](#)

- [Electric Guitar Specifications](#) - Checklist for building your own electric guitar.
- [Plotters](#) - Computer-controlled drawing machines and other visual art robots.
- [Robotic Tooling](#) - Free and open tools for professional robotic development.
- [LIDAR](#) - Sensor for measuring distances by illuminating the target with laser light.
- [Open Hardware](#) - Open-source hardware projects.
- [ADS-B](#) - Technology broadcasting aircraft's identity, position, and data periodically.
- [Flying FPV](#) - Open hardware and software related to drones / UAVs.

Business

- [Open Companies](#)
- [Places to Post Your Startup](#)
- [OKR Methodology](#) - Goal setting & communication best practices.
- [Indie](#) - Independent developer businesses.
- [Tools of the Trade](#) - Tools used by companies on Hacker News.
- [Clean Tech](#) - Fighting climate change with technology.
- [Wardley Maps](#) - Provides high situational awareness to help improve strategic planning and decision making.
- [Social Enterprise](#) - Building an organization primarily focused on social impact that is at least partially self-funded.
- [Engineering Team Management](#) - How to transition from software development to engineering management.
- [Developer-First Products](#) - Products that target developers as the user.
- [Billing](#) - Payments, invoicing, pricing, accounting, marketplace, fraud, and business intelligence.
- [Engineering Strategy](#) - How to design and execute engineering strategies for tech leadership.

Work

- [Slack](#) - Team collaboration.
 - [Communities](#)
- [Remote Jobs](#)
- [Productivity](#)
- [Niche Job Boards](#)
- [Programming Interviews](#)
- [Code Review](#) - Reviewing code.
- [Creative Technology](#) - Businesses & groups that specialize in combining computing, design, art, and user experience.

Networking

- [Software-Defined Networking](#)
- [PCAPTools](#)
- [Real-Time Communications](#) - Network protocols for near simultaneous exchange of media and data.
- [SNMP](#) - A protocol for collecting, modifying, and organizing information about managed devices on IP networks.
- [Scapy](#) - Python-based interactive packet manipulation.

- [Cilium](#) - Provides networking and security capabilities for containerized apps, microservices, and virtual machines.

Decentralized Systems

- [Bitcoin](#) - Services and tools for Bitcoin software developers.
- [Ripple](#) - Open source distributed settlement network.
- [Non-Financial Blockchain](#) - Applications of Blockchain beyond finance.
- [Mastodon](#) - Open source decentralized microblogging network.
- [Ethereum](#) - Distributed computing platform for smart contract development.
- [Blockchain AI](#) - AI and machine-learning projects built on Blockchain.
- [EOSIO](#) - A decentralized operating system supporting industrial-scale apps.
- [Corda](#) - Open source Blockchain platform designed for business.
- [Waves](#) - Open source Blockchain platform and development toolset for Web 3.0 apps and decentralized solutions.
- [Substrate](#) - Framework for writing scalable, upgradeable blockchains in Rust.
- [Golem](#) - Open source peer-to-peer marketplace for computing resources.
- [Stacks](#) - A smart contract platform secured by Bitcoin.
- [Algorand](#) - An open-source, proof of stake Blockchain and smart contract computing platform.
- [ZeroNet](#) - A decentralized web-like network of peer-to-peer users.
- [Cosmos SDK](#) - Modular framework for building app-specific blockchains in Go.
- [Tor](#) - A free overlay network for enabling anonymous communication.
- [ATProto](#) - Open, decentralized network for building social apps.

Health and Social Science

- [Biomedical Information Extraction](#) - How to extract information from unstructured biomedical data and text.
- [Computational Neuroscience](#) - A multidisciplinary science which uses computational approaches to study the nervous system.
- [Diversity](#) - Creating a more inclusive and diverse tech community.
- [Digital History](#) - Computer-aided scientific investigation of history.
- [Empathy in Engineering](#) - Building and promoting more compassionate engineering cultures.
- [Healthcare](#) - Open source healthcare software for facilities, providers, developers, policy experts, and researchers.
- [Mental Health](#) - Awareness and self-care in the software industry.
- [Neuroscience](#) - Study of the nervous system and brain.
- [Digital Humanities](#) - Software for humanities scholars using quantitative or computational methods.
- [Lucid Dreams](#) - A dream where one becomes aware they are dreaming.
- [Neuroimaging](#) - Software for analyzing brain data from living subjects.
- [Transgender](#) - Someone whose gender identity differs from their assigned birth sex.

Events

- [Creative Tech Events](#) - Events around the globe for creative coding, tech, design, music, arts and cool stuff.

- [Events in Italy](#) - Tech-related events in Italy.
- [Events in the Netherlands](#) - Tech-related events in the Netherlands.

Testing

- [Testing](#) - Software testing.
- [Visual Regression Testing](#) - Ensures changes did not break the functionality or style.
- [Selenium](#) - Open-source browser automation framework and ecosystem.
- [Appium](#) - Test automation tool for apps.
- [TAP](#) - Test Anything Protocol.
- [JMeter](#) - Load testing and performance measurement tool.
- [k6](#) - Open-source, developer-centric performance monitoring and load testing solution.
- [Playwright](#) - Node.js library to automate Chromium, Firefox and WebKit with a single API.
- [Quality Assurance Roadmap](#) - How to start & build a career in software testing.
- [Gatling](#) - Open-source load and performance testing framework based on Scala, Akka, and Netty.
- [CodeRabbit](#) - AI-powered code review platform.

Miscellaneous

- [Scientific Writing](#) - Distraction-free scientific writing with Markdown, reStructuredText and Jupyter notebooks.
- [JSON](#) - Text based data interchange format.
 - [GeoJSON](#)
- [CSV](#) - A text file format that stores tabular data and uses a comma to separate values.
- [Discounts for Student Developers](#)
- [Radio](#)
- [Awesome](#) - Recursion illustrated.
- [Analytics](#)
- [REST](#)
- [Continuous Integration and Continuous Delivery](#)
- [Services Engineering](#)
- [Free for Developers](#)
- [Sketch](#) - Design app for macOS.
- [Boilerplate Projects](#)
- [Readme](#)
- [GitHub Wiki](#) - Comprehensive documentation on GitHub beyond README.
- [Design and Development Guides](#)
- [Software Engineering Blogs](#)
- [Self Hosted](#)
- [FOSS Production Apps](#)
- [Gulp](#) - Task runner.
- [AMA](#) - Ask Me Anything.
 - [Answers](#)
- [Open Source Photography](#)
- [OpenGL](#) - Cross-platform API for rendering 2D and 3D graphics.

- [GraphQL](#)
- [Urban & Regional Planning](#) - Concerning the built environment and communities.
- [Transit](#) – Data standards, APIs, apps, tools, datasets, and research around open source technology of public transit.
- [Research Tools](#)
- [Data Visualization](#)
- [Microservices](#)
- [Unicode](#) - Standards, quirks, packages and resources for Unicode.
 - [Code Points](#)
- [Beginner-Friendly Projects](#)
- [Katas](#)
- [Tools for Activism](#)
- [Citizen Science](#) - For community-based and non-institutional scientists.
- [MQTT](#) - "Internet of Things" connectivity protocol.
- [For Girls](#)
- [Vorpai](#) - Node.js CLI framework.
- [Vulkan](#) - Low-overhead, cross-platform 3D graphics and compute API.
- [LaTeX](#) - Typesetting language.
- [Economics](#) - An economist's starter kit.
- [Funny Markov Chains](#)
- [Bioinformatics](#)
- [Cheminformatics](#) - Informatics techniques applied to problems in chemistry.
- [Colorful](#) - Choose your next color scheme.
- [Steam](#) - Digital distribution platform.
- [Bots](#) - Building bots.
- [Site Reliability Engineering](#)
- [DTrace](#) - Dynamic tracing framework.
- [Userscripts](#) - Enhance your browsing experience.
- [Pokémon](#) - Resources for Pokémon and Pokémon GO.
- [ChatOps](#) - Managing technical and business operations through a chat.
- [Falsehood](#) - Falsehoods programmers believe in.
- [Domain-Driven Design](#) - Software development approach for complex needs by connecting the implementation to an evolving model.
- [Quantified Self](#) - Self-tracking through technology.
- [Web Design](#) - For digital designers.
- [Creative Coding](#) - Programming something expressive instead of something functional.
- [No-Login Web Apps](#) - Web apps that work without login.
- [Free Software](#) - Free as in freedom.
- [Framer](#) - Prototyping interactive UI designs.
- [Markdown](#) - Markup language.
- [Dev Fun](#) - Funny developer projects.
- [Magento 2](#) - Open Source eCommerce built with PHP.
- [TikZ](#) - Graph drawing packages for TeX/LaTeX/ConTeXt.
- [Ad-Free](#) - Alternatives without ads.

- [Prometheus](#) - Open-source monitoring system.
- [Homematic](#) - Smart home devices.
- [Ledger](#) - Double-entry accounting on the command-line.
- [Web Monetization](#) - A free open web standard service that allows you to send money directly in your browser.
- [Uncopyright](#) - Public domain works.
- [Crypto Currency Tools & Algorithms](#) - Digital currency where encryption is used to regulate the generation of units and verify transfers.
- [Open Source Supporters](#) - Companies that offer their tools and services for free to open source projects.
- [Design Principles](#) - Create better and more consistent designs and experiences.
- [Theravada](#) - Teachings from the Theravada Buddhist tradition.
- [inspectIT](#) - Open source Java app performance management tool.
- [Open Source Maintainers](#) - The experience of being an open source maintainer.
- [Calculators](#) - Tools for every platform.
- [Captcha](#) - A type of challenge-response test used in computing to determine whether or not the user is human.
- [Jupyter](#) - Create and share documents that contain code, equations, visualizations and narrative text.
- [FIRST Robotics Competition](#) - International high school robotics championship.
- [Speakers](#) - Conference and meetup speakers in the programming and design community.
- [Board Games](#) - Table-top gaming fun for all.
- [Software Patreons](#) - Fund individual programmers or the development of open source projects.
- [Parasite](#) - Parasites and host-pathogen interactions.
- [Food](#) - Projects on GitHub related to food.
- [Bitcoin Payment Processors](#) - Start accepting Bitcoin.
- [Scientific Computing](#) - Solving complex scientific problems using computers.
- [Amazon Sellers](#)
- [Agriculture](#) - Open source technology for farming and gardening.
- [Product Design](#) - Design a product from the initial concept to production.
- [Prisma](#) - Turn your database into a GraphQL API.
- [Software Architecture](#) - The discipline of designing and building software.
- [Connectivity Data and Reports](#) - Better understand who has access to telecommunication and internet infrastructure and on what terms.
- [Stacks](#) - Tech stacks for building different apps and features.
- [Cytodata](#) - Image-based profiling of biological phenotypes for computational biologists.
- [IRC](#) - Open source messaging protocol.
- [Advertising](#) - Programmatic media and ad tech for websites.
- [Earth](#) - Find ways to resolve the climate crisis.
- [Naming](#) - Guides for naming things in computer science.
- [Web Archiving](#) - An effort to preserve the Web for future generations.
- [WP-CLI](#) - Command-line interface for WordPress.
- [Credit Modeling](#) - Methods for classifying credit applicants into risk classes.
- [Ansible](#) - A Python-based, open-source IT configuration management and automation platform.
- [Biological Visualizations](#) - Interactive visualization of biological data on the web.

- [QR Code](#) - A type of matrix barcode that can be used to store and share a small amount of information.
- [Veganism](#) - Making the plant-based lifestyle easy and accessible.
- [Translations](#) - The transfer of the meaning of a text from one language to another.
- [Scriptable](#) - An iOS app for automation in JavaScript.
- [WebXR](#) - Enables immersive virtual reality and augmented reality content on the web.
- [Computational Geometry](#) - Computational approaches for problems in geometry.
- [OpenStreetMap](#) - An open data mapping project utilized by many apps and devices.
- [Computational Biology](#) - Computational approaches applied to problems in biology.
- [Read the Docs](#) - Example documentation projects to inspire and help bootstrap new documentation projects.
- [Quarto](#) - Scientific and technical open-source publishing system built on Pandoc.
- [Biological Image Analysis](#) - Interpreting biological phenomena using images.
- [ChatGPT](#) - Artificial intelligence chatbot developed by OpenAI.
- [Whisper](#) - Open-source AI-powered speech recognition system developed by OpenAI.
- [Stock Trading](#) - Purchase and sale of equities of publicly traded companies to generate profits.
- [Steam Deck](#) - A handheld gaming computer developed by Valve.
- [Astrophotography](#) - Photography of astronomical objects, celestial events, or areas of the night sky.
- [HPC](#) - High Performance Computing.
- [Geocaching](#) - Outdoor treasure-hunting activity that uses GPS-enabled devices.
- [Regex](#) - Specialized language for matching patterns in text.
- [Event-Driven Architecture](#) - A software architecture approach where services collaborate by publishing and subscribing to events.
- [Permacomputing](#) - Resilient and regenerative computing practices inspired by permaculture.
- [Standards](#) - Proposals and standards that define and enhance software, languages, and related technologies.
- [Claude Code](#) - Terminal-based AI coding assistant by Anthropic.
- [Gemini CLI](#) - Terminal-based AI coding assistant by Google.
- [SAP Commerce](#) - An e-commerce platform built with Java, Spring MVC, and Angular.

Sponsor this project

- [Tech Ethics](#) - Mitigating and avoiding the potential negative effects of technology on society.
- [Copilot Agents](#) - AI pair programming assistant by GitHub that provides code suggestions and completions.
